

List of Contents

NUMBER 1

Simon K. Kearsley	1	A quick robust method for assigning a Kekulé structure
F. T. Chau, K. Y. Tam, K. S. Lau and K. H. Wong	11	A computer-based trigger system for a laser induced plasma spectrometer
Ulrike Seebacher and Michael Ramek	19	Integral re-use in the numerical calculation of vibrational frequencies in <i>ab initio</i> SCF programs
L. L. Stachó and M. I. Bán	21	Procedure for determining dynamically defined reaction path
E. N. Trifonov	27	Gene splicing: spatial separation of overlapping messages
Amnon Birenzvig, Larry M. Sturdivan, George R. Famini and P. N. Krishnan	33	Estimating physical properties of chemical compounds: problem revisited
André G. Michel and Catherine Jeandenans	49	Multiconformational investigations of polypeptidic structures, using clustering methods and principal components analysis
Arne Lüchow and Heinz Kleindienst	61	Stable and efficient algorithm for selected eigenvalues and eigenvectors of the general symmetric eigenproblem
K. Palmö, L.-O. Pietilä and S. Krimm	67	Optimization of parameters of nonbonded interactions in a spectroscopically determined force field
H. Collazo-Lopez, M. Koch and W. T. Cooper	73	Mathematical correction for variable $T_{1\rho H}$ relaxation of overlapping signals in solid state ^{13}C cross polarization NMR spectroscopy
Bastiaan van de Graaf and Erik de Vos Burchart	81	Simplification and acceleration of crystal energy calculations under constant pressure
Gustavo Daniel Barrera and Alicia Batana	83	Thermal expansion and third order elastic constants of FCC metals
Scott Elliott, Richard P. Turco and Mark Z. Jacobson	91	Tests on combined projection/forward differencing integration for stiff photochemical family systems at long time step
<i>Application Note</i> Joseph Chrastil	103	Determination of the first-order consecutive reversible reaction kinetics

Software Note

NUMBER 2

OPEN PROBLEMS OF COMPUTATIONAL MOLECULAR BIOLOGY (2)

Editorial

Andrzej K. Konopka

- v Computational molecular biology: from sequence research to software development

Area 1: Overviews and Opinions

Michael Gribskov

- 113 A mechanistic view of proteins and their sequences

William R. Taylor

- 117 Protein structure prediction from sequence

Area 2: Mathematical Models

**Mark Borodovsky and
James McIninch**

- 123 GENMARK: parallel gene recognition for both DNA strands

**Peter Salamon,
John C. Wootton,
Andrzej K. Konopka and
Lars K. Hansen**

- 135 On the robustness of maximum entropy relationships for complexity distributions of nucleotide sequences

**John C. Wootton and
Scott Federhen**

- 149 Statistics of local complexity in amino acid sequences and sequence databases

Area 3: Computational Experiments and Molecular Evolution

James J. Murtagh Jr

- 165 The multigene families of guanine nucleotide-binding proteins: evolutionary and computational analysis

**Jonathan D. Blake and
R. D. Blake**

- 177 The use of multi-dimensional scaling to investigate similarities between non-random oligonucleotide frequencies in introns and exons

**George I. Bell and
David C. Torney**

- 185 Repetitive DNA sequences: some considerations for simple sequence repeats

Area 4: Data Analysis and Software Development
